APPLICATIONS DEVELOPMENT SERVICES AND EXPERTISE

Application Design and Development
- Providing a full range of development activities, including coding, testing, debugging, documenting, maintaining, and modifying applications
- Designing a great User Interface (**UI**) and User Experience (**UX**) for applications
- Creating builds for software releases for quality assurance and client user acceptance testing

Application Integration
- Enabling integration between applications and systems
- Working with APIs, Web services, and connectors

Application Management and Support
- Providing application management and support services for new and existing applications
- Resolving technical and functional issues as needed

Project Management
- Establishing and managing timelines
- Managing the project to the agreed-to budget
- Coordinating application development, implementation, and documentation
- Assessing and managing risks throughout the process
- Documenting features, fixes, and configurations
- Communicating with stakeholders

Application Maintenance
- Conducting reviews to ensure standards and requirements are being met
- Ensuring systems are performing optimally

Key Areas of Expertise
- Enterprise Resource Planning (ERP)
- Customer Relationship Management (CRM)
- Business Intelligence (BI) and Analytics

ENTERPRISE APPLICATION INTEGRATION

Enterprise-wide application integration is necessary for organizations to not only optimize their IT landscapes, but also gain business agility, take advantage of new sales and marketing channels, and easily access data from devices and social channels. EIS helps your organization accelerate business growth by looking at Enterprise Application Integration (EAI) as a chance to adopt new architecture patterns and paradigms such as micro services and event driven architecture to accelerate time–to-market and dynamically improve infrastructure
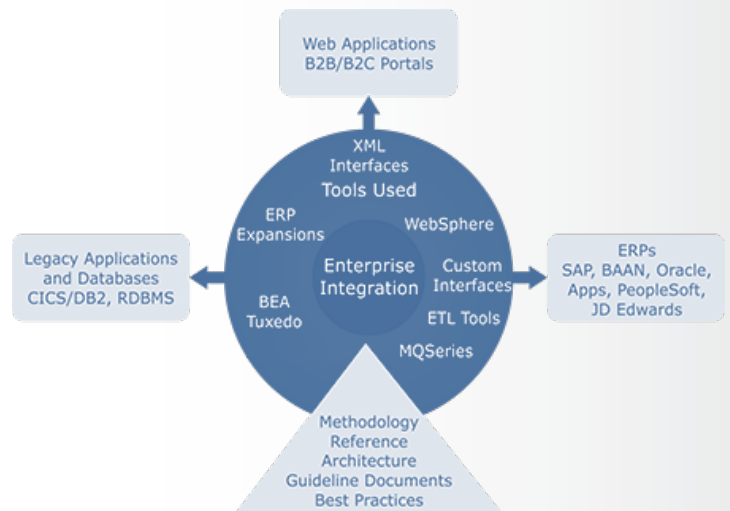

Seamlessly modernize enterprise architecture to revolutionize your business EIS has deep understanding of new models for EAI and offers companies a fresh way to build their enterprise applications quickly and more cost effectively. We can partner with you to transform your heterogeneous, complex enterprise IT landscape into a seamlessly integrated, robust IT architecture capable of delivering new business value. Our services include:

- Business case development
- Assessment and strategy formulation
- Product evaluation
- Architecture standardization
- Implementation of top-of-the-line EAI solutions

with over 30 successful projects under its belt. We have created mobile apps of any complexity from award-winning B2C applications to heavy enterprise-grade mobile solutions that automate mission-critical business processes.

Our talent pool of mobile app developers includes highly-skilled analysts, UX experts and certified software engineers who are well-versed in building apps for all the major platforms — whether it's iOS, Android, or both. Apps can be developed natively, or by using cross-platform frameworks.

Key Areas of Mobile Development Expertise

iOS App Development
Tap into our iOS development talent-pool to build beautiful apps, enterprise-grade mobile solutions, or engaging games.

Android App Development
Develop powerful, highly usable Android apps that solve business problems, attract users, and reinforce your brand.

Cross-Platform Development
Cut your development and maintenance costs with cross-platform apps that work seamlessly on iOS, Android, and more.

SOFTWARE TESTING AUTOMATION

Automation testing is a technique uses an application to implement entire life cycle of the software in less time and provides efficiency and effectiveness to the testing software.

- ✓ 70% faster than the manual testing
- ✓ Wider test coverage of application features
- ✓ Reliable in results
- ✓ Ensure Consistency
- ✓ Saves Time and Cost
- ✓ Improves accuracy

Key Areas of Testing Automation

- Smoke Testing
- Unit Testing
- Integration Testing
- Functional Testing
- Keyword Testing
- Regression Testing
- Data Driven Testing
- Black Box Testing

PCI COMPLIANCE SERVICES

The number of organizations that accept credit cards as payment, and the number of methods they utilize to accept those payments, has grown exponentially in the last several years. The number and complexity of services and systems to support those organizations has also proliferated at a staggering pace.

Accordingly, risks associated with the relationships between merchants who accept credit cards as payment and the entities that support them have also increased—and that has been demonstrated by the breach activity that has made headlines in the last several years.

Key Areas of our Expertise

- Advanced Consultancy & Security Testing Services
- PCI Gap Analysis
- Competition PCI ASV
- PCI QSA
- Advanced Cyber Forensics & Incident Respond

Phishme:

PhishMe is the leading provider of phishing threat management for organizations concerned about human susceptibility and response to advanced targeted attacks. PhishMe's intelligence-driven solutions empower employees to be an active line of defense and source of attack intelligence by enabling them to identify, report, and mitigate spear phishing, malware, and drive-by threats. Our phishing incident response platform and phishing threat intelligence enables SOC and IR teams to respond faster to real threats – decreasing the risk of data breaches.

Tenable:

Tenable Passive Vulnerability Scanner™ (PVS™) removes blind spots by continuously discovering and tracking users, applications, cloud infrastructure, trust relationships, and vulnerabilities. It also automatically discovers users, infrastructure, and vulnerabilities across operating systems, network devices, hypervisors, databases, tablets, phones, web servers, cloud applications, and critical infrastructure. PVS is a patented network discovery and vulnerability analysis technology that delivers continuous network scanning and profiling non-intrusively. PVS monitors IPv4, IPv6, and mixed network traffic at the packet layer to determine topology, services, and vulnerabilities. PVS can be used alone to effectively target network segments or small networks, and is also an integrated component of Tenable Security Center Continuous Vie

Anomali:

Anomali delivers earlier detection and identification of adversaries in your organizations network by making it possible to match tens of millions of threat indicators against your real time network activity logs and up to a year or more of forensic log data. The Anomali approach enables detection at every point along the kill chain, making it possible to mitigate threats before material damage to your organization has occurred

SkyBox Security:

Reduce your attack surface and contain cyberattacks fast with a cybersecurity management solution that gives you total visibility and actionable security intelligence.

The Skybox Platform combines firewall and network device data with vulnerability and threat intelligence, prioritizing security issues in the context of your unique environment.

Powerful attack vector analytics reduce response times and risks, bringing firewall, vulnerability and threat management processes for complex networks under control.
